

**Dr.WEB**

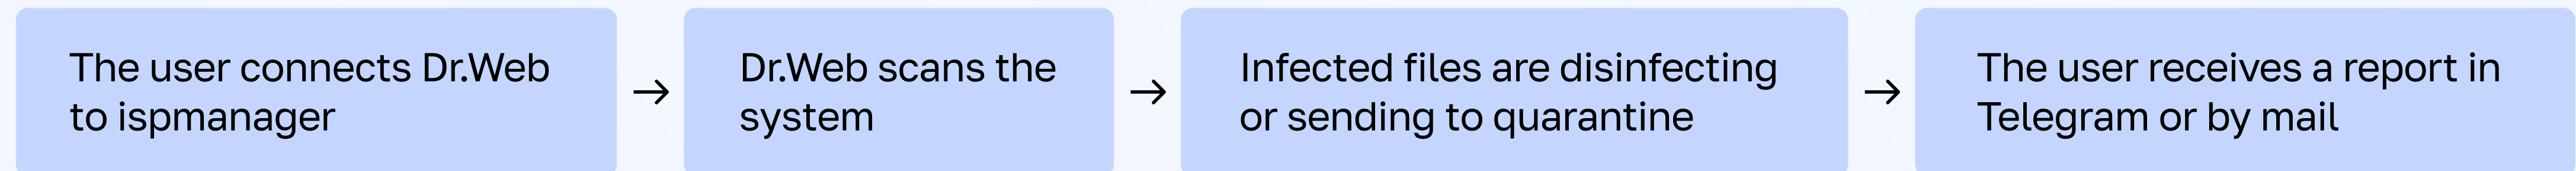

NEW

# Antivirus module in ispmanager

Protection for your customers and advantage for you

# What is Dr.Web module in ispmanager

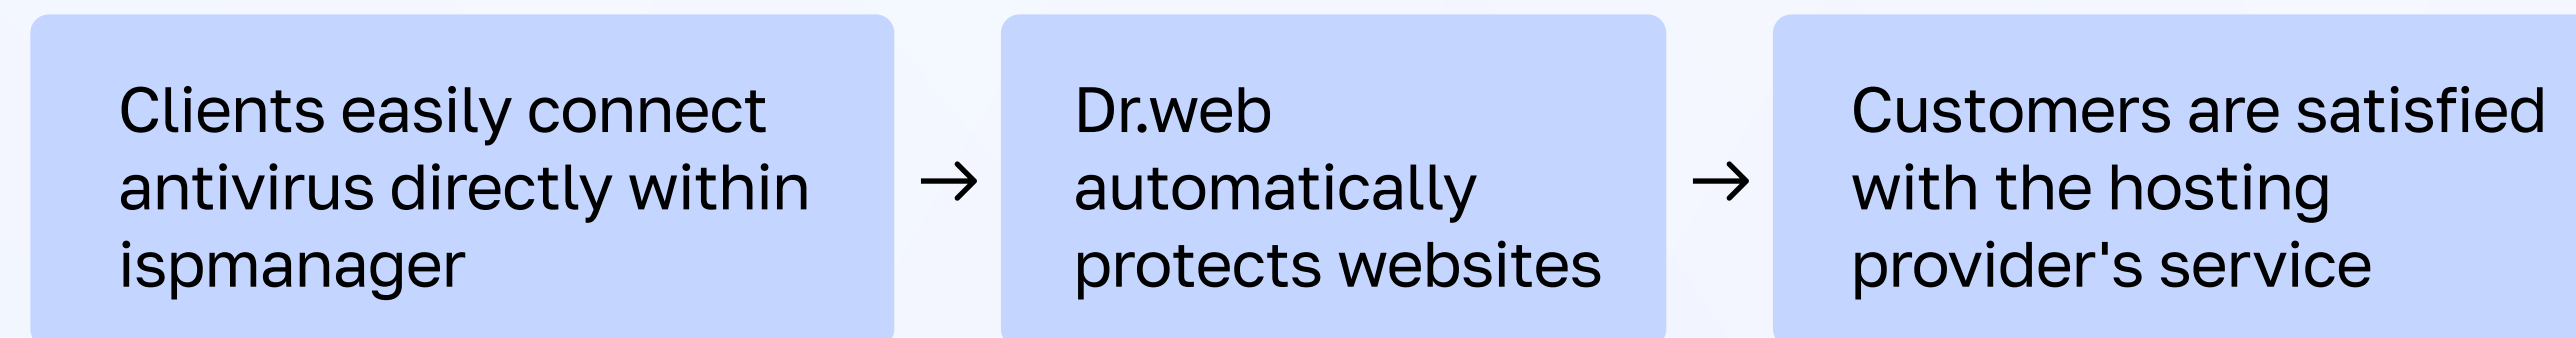

Dr.Web is a new antivirus module in ispmanager that protects the server from threats.  
It scans files for viruses, disinfects and restores infected ones

# First Advantage

## The better customers services

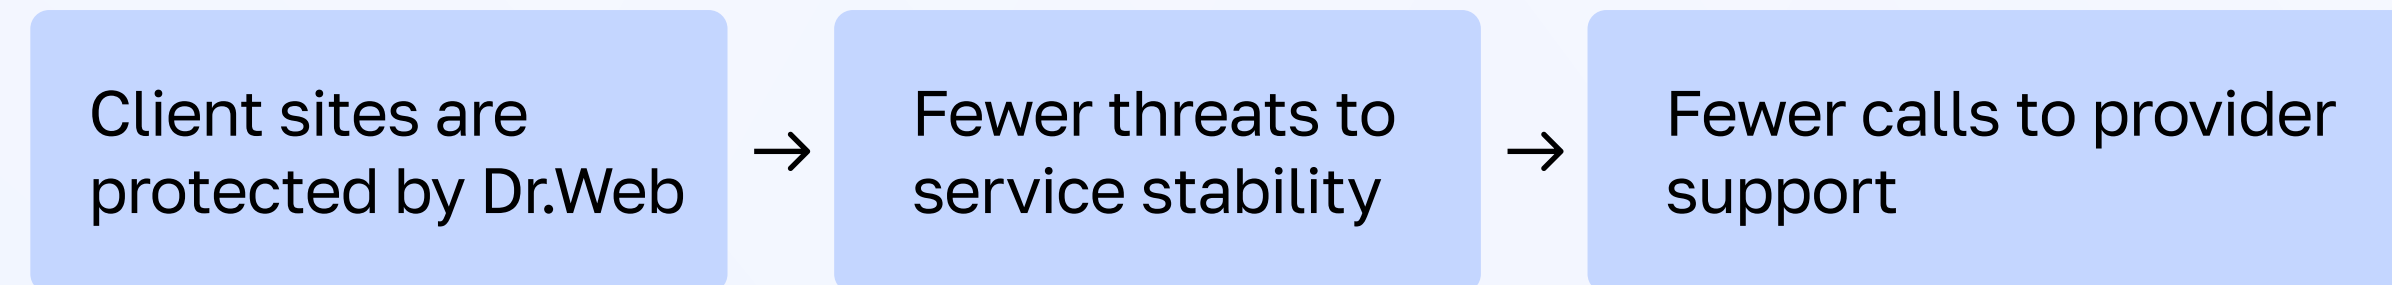

Dr.Web is integrated into the ispmanager interface. It is enough for the user to select the sites that he wants to be scanned and set a schedule

# Second Advantage

## Reducing the busyness of technical support

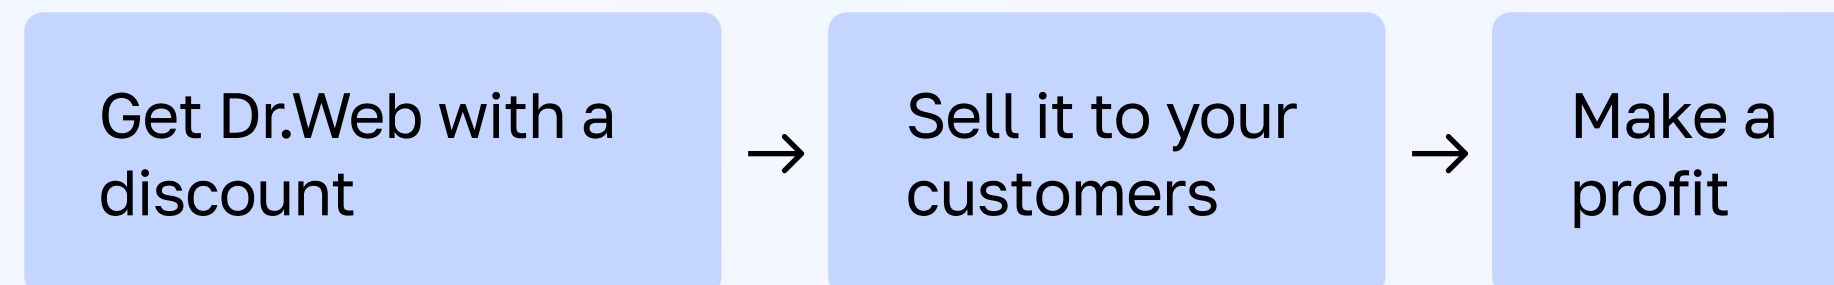

Panel users can choose to scan their sites but the administrator can enable protection of the entire server. Dr.Web will save the provider from problems connected with virus infection of user data

# Third Advantage

## Additional profit for you

The Dr.Web module is commercial and its cost is not included in the cost of the ispmanager license

# How to start selling Dr.web to clients

We have prepared information that will help you start selling the Dr.web module  
[Instructions for setting up Dr.Web sales in billing](#)

We are ready to advise on setting up the module and its promotion – please contact your manager with questions and suggestions or write to [bizdev@ispmanager.com](mailto:bizdev@ispmanager.com)
